

Incident handler's journal

Date: Jan 18, 2026	Entry: #1
Description	<p>Documenting a cybersecurity incident</p> <p>This incident occurred in the two phases:</p> <ol style="list-style-type: none">Detection and Analysis: The scenario outlines how the organization first detected the ransomware incident. For the analysis step, the organization contacted several organizations for technical assistance.Containment, Eradication, and Recovery: The scenario details some steps that the organization took to contain the incident. For example, the company shut down their computer systems. However, since they could not work to eradicate and recover from the incident alone, they contacted several other organizations for assistance.
Tool(s) used	None
The 5 W's	<ul style="list-style-type: none">Who: An organized group of unethical hackersWhat: A ransomware security incidentWhere: At a health care companyWhen: Tuesday 9:00 a.m.Why: The incident happened because unethical hackers were able to access the company's systems using a phishing attack. After gaining access, the attackers launched their ransomware on the company's systems, encrypting critical files. The attackers' motivation appears to be financial because the ransom note they left demanded a large sum of money in exchange for the decryption key.
Additional notes	<ol style="list-style-type: none">Add Course for cybersecurity for employee.Add MFA and regulate access.

Description	Analyzing a packet capture file (Wireshark)
Tool(s) used	For this activity, I used Wireshark to analyze a packet capture file. Wireshark is a network protocol analyzer that uses a graphical user interface. The value of Wireshark in cybersecurity is that it allows security analysts to capture and analyze network traffic. This can help in detecting and investigating malicious activity.
The 5 W's	<ul style="list-style-type: none"> ● Who: N/A ● What: N/A ● Where: N/A ● When: N/A ● Why: N/A
Additional notes	I've never used Wireshark before, so I was excited to begin this exercise and analyze a packet capture file. I can see why it's such a powerful tool for understanding network traffic a little bit now.

Date: Jan 26 2026	Entry: #3
Description	Capturing my first packet (tcpdump)
Tool(s) used	For this activity, I used tcpdump to capture and analyze network traffic. Tcpdump is a network protocol analyzer that's accessed using the command-line interface. Similar to Wireshark, the value of tcpdump in cybersecurity is that it allows security analysts to capture, filter, and analyze network traffic.
The 5 W's	<ul style="list-style-type: none"> ● Who: N/A ● What: N/A ● Where: N/A ● When: N/A ● Why: N/A

Additional notes	I'm still new to using the command-line interface, so using it to capture and filter network traffic was a good challenge. But after carefully following the instruction become pretty easy, I was able to get through this activity and capture network traffic.

Description	Investigate a suspicious file hash (VirusTotal)
Tool(s) used	<p>For this activity, I used VirusTotal, which is an investigative tool that analyzes files and URLs for malicious content such as viruses, worms, trojans, and more. It's a very helpful tool to use if you want to quickly check if an indicator of compromise like a website or file has been reported as malicious by others in the cybersecurity community. For this activity, I used VirusTotal to analyze a file hash, which was reported as malicious.</p> <p>This incident occurred in the Detection and Analysis phase. The scenario put me in the place of a security analyst at a SOC investigating a suspicious file hash. After the suspicious file was detected by the security systems in place, I had to perform deeper analysis and investigation to determine if the alert signified a real threat.</p>
The 5 W's	<ul style="list-style-type: none"> ● Who: An unknown malicious actor ● What: An email sent to an employee contained a malicious file attachment with the SHA-256 file hash of 54e6ea47eb04634d3e87fd7787e2136ccfbcc80ade34f246a12cf93bab52 7f6b ● Where: An employee's computer at a financial services company ● When: At 1:20 p.m., an alert was sent to the organization's SOC after the intrusion detection system detected the file ● Why: An employee was able to download and execute a malicious file attachment via e-mail.

Additional notes	Add course for employee to give them knowledge about phishing and malevolent actor.
